

PROFILE

Early-career software engineer and cybersecurity MSc graduate with experience building cloud applications, AI systems, security-focused programs and protocols. Comfortable translating technical requirements into working software and collaborating across research, engineering and client-facing teams.

WORK EXPERIENCE

- Cloud Solutions Architect Intern at Microsoft

Feb 2026 - Jul 2026

 - Built AI agents to orchestrate data across the Microsoft security ecosystem, automating parts of incident triage and supporting SOC analyst workflows.
 - Designed and deployed Azure deception environments using decoy identities, Azure Key Vaults and virtual machines to attract unauthorized enumeration and generate detection telemetry in Microsoft Defender and Microsoft Sentinel.
 - Investigated Redis forensic workflows, evaluating logging, detection, backup and recovery strategies to support security investigations.
 - Developed a modular lab generator that programmatically creates attack-defense scenarios by chaining vulnerabilities, using Ansible and Terraform for repeatable infrastructure setup for internal security exercises.
 - Collaborated with Cloud Solutions Architects and client stakeholders, such as prominent global financial systems, to align security architectures with technical requirements and long-term customer outcomes.
- Software Engineer Trainee at CERN

Jul 2025 - Sep 2025

 - Contributed to a privacy-preserving Federated Learning framework for processing sensitive healthcare and clinical datasets.
 - Implemented and evaluated secure protocols while working with a research team to translate machine-learning concepts into decentralized software solutions.
- Research Intern at EURECOM

Jul 2024 - Oct 2024

 - Developed a privacy-preserving biometric verification system using Homomorphic Encryption, Multi-Party Computation and Function Secret Sharing.
 - Implemented cryptographic protocols in Go using the Lattigo library and contributed to research resulting in a conference paper.
- Data Science Intern at IBTECH

Oct 2023 - Mar 2024

 - Translated banking requirements into data analyses and recommendations in collaboration with cross-functional teams.
 - Processed datasets containing more than 5 million rows using Python and SQL, supporting data-driven business decisions.
- Software Engineer Intern at Sabanci Holding

Jul 2022 - Sep 2022

 - Developed a Python and Qt desktop application with speech recognition to manipulate tire-tread design files through voice commands.
 - Reduced manual input in the engineering design workflow by improving user interaction and automating repetitive operations.

EDUCATION

- KU Leuven

Sep 2025 - Sep 2026

MSc in Cybersecurity, Language of Instruction: English
Thesis: On Practical Verifiable Timed Secret Sharing
- Galatasaray Universitesi

Oct 2019 - Jun 2025

BSc in Computer Engineering, Language of Instruction: French/Turkish
- Universite de Lille (Erasmus)

Sep 2022 - Jul 2023

BSc in Computer Science, Language of Instruction: French

SKILLS

Programming	Go, Python, Java, C, SQL, Bash
Software Engineering	Data Structures, Algorithms, Design Patterns, Git, GitHub Actions
Cloud and Infrastructure	Azure, Terraform, Bicep, Ansible, Docker
Data and Systems	Relational Databases, Redis, Kafka, Spark
AI and Security	AI agents, Federated Learning, Cloud Deception, Threat Detection, Security Telemetry
Languages	Turkish (Native), English (Fluent), French (Intermediate)

RESEARCH

- Federation of Agents: A Semantics-Aware Communication Fabric for Large-Scale Agentic AI, NeurIPS 2025 ER Workshop, San Diego, CA.
- Another Walk for Monchi, 17th International Symposium on Foundations & Practice of Security (FPS 2024), Montreal, Canada.

SELECTED CERTIFICATIONS

GitHub Actions, Microsoft	Jul 2026
GitHub Advanced Security, Microsoft	Jul 2026
Security, Compliance and Identity Fundamentals, Microsoft	Feb 2026
